Abstract (en)

[origin: WO2006128560A1] The invention relates to a method of applying beads (12) of a pasty mass (14), having an at least two-component hardenable adhesive or sealant, to workpieces (16), a first component (B) and a second component (H) being fed to a mixing chamber and being mixed in the latter, and the pasty mass (14), for forming the beads (12), being applied to the workpieces (16) under the application of pressure via an application nozzle (20). According to the invention, provision is made for the mixing ratio of the first and the second component (B,H) to be varied during the application of the beads (12) by means of a control unit (30) by time-dependent control of the volumetric feed of the two components (B,H) into the mixing chamber.
