Abstract (en)

[origin: WO2006122820A1] A device for radially supporting and axially displaceably mounting an annular disk on a consequently rotationally fixedly connected hub, in particular a brake disk (1) on a wheel hub (2) of a commercial vehicle, is embodied such that the device has an outer ring (5) which is connected to the disk, an inner ring (6) which is connected to the hub, and rolling bodies (7) arranged between said rings, the outer (5) and inner rings (6) being supported on said rolling bodies (7) so as to be axially moveable relative to one another.
