Abstract (en)

[origin: EP1729249A1] The method involves recording an invoice data for carrying out a payment process for an invoice payment, and generating and printing an invoice document. An invoice data is stored in a read only radio frequency identification (RFID) chip. The document with the chip is sent to a debtor (50). The invoice data from the chip is read out by a reader (52). The read-out data is transmitted to an automated payment transaction system (30) and the process is carried out to a payee (20) based on the read-out data, where the printed out document is provided with the chip at different positions. Independent claims are also included for the following: (1) a method for automated generation of invoice document (2) an invoice document including an invoice data necessary for carrying out a payment process for a payment settlement (3) a method for automated processing of an invoice document for carrying out a payment process from a debtor to a payee.
