Abstract (en)

[origin: WO2006128597A1] The invention relates to a method for preparing an end of a cable, in particular a coaxial cable, having an outer conductor, in particular outer conductor braiding, for fitting a plug-in connector, in particular a coaxial plug-in connector, the outer conductor being exposed at the end of the cable, flared radially and bent back over a predetermined length in the axial direction away from the end of the coaxial cable. In the process, for flaring purposes, the outer conductor has a radial force applied to it over at least part of the circumference of the cable.
