Abstract (en)

[origin: WO2006116883A1] The invention relates to a device and method for compensating for changes, which result on an original signal (17) due to a transmission along a signal path (2, 3, 4, 7) from a source (1) to a receiving listener (5). According to the invention, the changes, which occur in the signal path (2, 3, 4, 7), of the original signal (17) are compensated for by minimizing differences between the original signal (17) and a reproduced signal, which is perceived by the receiving listener (5). This makes it possible for the receiving listener (5) to perceive the originally recorded original signal (17).
