Abstract (en)

[origin: EP1886778A1] The method involves dividing an endless plate into individual carrier plates. A decor paper is provided or manufactured in a pressing machine by pressing. The decor paper is pressed on the carrier plate in a laminate press, where the carrier plate exhibits a length of 2.070 millimeter longitudinal to a conveying direction. The carrier plate and or the decor paper are moved and/or rotated in front of the laminate press from the conveying direction in order to guide the carrier plate and the decor paper into a cover together into the laminate press. An independent claim is also included for a device for manufacturing laminate panels.
