Abstract (en)

[origin: EP1886831A2] The device has antagonistic rollers with projections, disengagement or hollow zones and flat wheel for grooving sheets to facilitate folding of the sheets and maintaining the sheets in a folded form. A plate (40) receives the grooved sheets and compiles the sheets between them at ends to produce a photographic album. The plate is movable in translation according to parallel direction at direction of progression of the sheets within the device and movable between positions and synchronous with the operation of a folding unit. An automatic measuring unit measures length of the sheets.
