Abstract (en)

[origin: EP1886940A1] The device has a locking sleeve (20) with an annular skirt (26) axially extending from an annular plate (25). The sleeve has an intermediate portion (26a) and an end portion (26b) that moves between a free state and a deformed state. A retaining ring (21) houses the sleeve and comprises an internal surface fixed on an external surface of the portion (26a) with friction. The sleeve has a rim (27) axially extending opposite to the skirt from the plate. The rim has an external surface axially aligned with the external surface of the intermediate portion of the skirt. Independent claims are also included for the following: (1) a distributor comprising a distributing assembly and a container (2) a method for assembling a distributor.
