Abstract (en)

Method for controlling the winding into reel (30) comprising the steps of providing a rotary winding cylinder (13); providing at least a support (3, 23) of a rod (2, 31); winding said web material around the rod (2, 31); detecting a contact pressure (p); correlating the detected value of contact pressure (P) to at least a characteristic winding parameter; and driving said support (3, 23) to obtain predetermined values of said parameter during the winding.
