Abstract (en)

The assembly set (40) to assemble a given number of system parts of a circular knitting machine, comprises a foil packing (45, 46) having a first chamber (41), a second chamber (42), and third chamber (43). The chambers (41, 42) are independently formed in the foil packing and are independently opened. The first, second and third chambers have system parts of a first-, a second- and third type in a number needed to assemble the knitting machine respectively. The system parts are arranged in one of the chambers arranged in that order, in which they are formed in the knitting machine. The assembly set (40) to assemble a given number of system parts of a circular knitting machine, comprises a foil packing (45, 46) having a first chamber (41), a second chamber (42) and third chamber (43). The chambers (41, 42) are independently formed in the foil packing and are independently opened. The first, second and third chambers have system parts of a first-, a second- and third type in a number needed to assemble the knitting machine respectively. The system parts are arranged in one of the chambers arranged in that order, in which they are formed in the knitting machine. The system parts of the first and second type belong to a cord cylinder and ribbed plate of the knitting machine respectively. The system parts of the first, second and third types are knitting machine needles, closing blanks and selection parts respectively. The foil packing has an upper and a lower transparent foil, those are welded with one another to form between the chambers. The upper and the lower foil are welded together along straight lines parallel seams and extend all chambers over the entire length along the welding seams. The chambers are longitudinally formed, are arranged parallel to each other and separated in sections. The upper foil is formed greater than the lower foil.

Abstract (de)

Das erfindungsgemäße Bestückungsset zur Bestückung einer Strickmaschine wird durch die zur Bestückung der Strickmaschine erforderlichen Systemteile gebildet, die nach Typen sortiert in unterschiedlichen Kammern einer Verpackung angeordnet sind. Die Kammern sind rundum geschlossen und schützen die verpackten Systemteile vor Umwelteinflüssen und Verlust. Die Verpackung ist vorzugsweise nur zerstörend zu öffnen, wobei die Kammern der Verpackung unabhängig voneinander aufgeschnitten werden können. Die Reihenfolge der Systemteile in den einzelnen Kammern entspricht vorzugsweise der Reihenfolge, in der sie in die Strickmaschine einzusetzen sind. Dies gilt insbesondere für Systemteile mit verschiedenen Fußpositionen.
