Abstract (en)
[origin: EP1887135A2] Track (1) for rail vehicles comprises a solid track (5) with an end section that adjoins a ballasted track and has reduced spring rigidity in the support layers at higher support point rigidities. Preferred Features: The spring rigidity of the support layers of the solid track gradually or continuously reduces. The elasticity of the fixing of the rails (2, 3) becomes more rigid toward the end section of the solid track. At least one layer of the solid track, especially the support plate (7) and/or a support layer, becomes more elastic toward the end section of the solid track.
