Abstract (en)
The barrier has horizontal rails integrated to supports or posts fixed to the ground and provided with a wood plate (1), where each rail has metallic rods (5) e.g. nails, suitably divided on the totality of its length. The metallic rods are introduced in thickness of the plate at an angle between twenty to forty degrees at their surfaces to avoid ejection of scraps of the plate under effects of shock. Rigid support elements (2) of the plate are connected to each other by a coupling sleeve (3).

Abstract (fr)
La glissière comprend au moins une lisse rendue solidaire des supports ou poteaux fixés au sol, la ou les lisses étant composée(s) d'un rondin en bois (1). Chaque lisse présente, convenablement répartis sur la totalité de sa longueur, des moyens (5) aptes à éviter que des morceaux de bois du rondin (1) soient éjectés sous l'effet d'un choc.
