Abstract (en)

This invention relates to a fastening device (32) adapted for being attached to a heat exchanger core (12), said core having two opposite main faces (36, 30) and at least one end face (28, 30) connecting said main faces. The device is a one-part moulded component having a bottom wall and two opposite side walls depending on said bottom wall for providing a substantially U-shaped profile adapted for engaging the main faces and the end face of the heat exchanger by a clipping effect, said component having at least one fastening feature (34) integrally moulded therewith. This invention is applicable to automotive heat exchangers.
