Abstract (en)
[origin: WO2006116978A1] The invention relates to a transport palette (1) for fencing elements, where longitudinal spars (2, 3) and transverse spars (5, 6) form a horizontal rectangular support frame (7). Upward facing retainer arrangements (8) are provided for the plug-insertion arrangement of the ends of the upright tubes of the fence elements. A palette base (9) extends between the longitudinal spars (2, 3) and transverse spars (5, 6). The separation between the lower edges of the inserted fence elements in a section between the upright tubes of a fence element and the palette base (9) corresponds to at least 1.2 times the free length of the tube end.
