Abstract (en)

[origin: WO2006127259A2] An adjustable nozzle attachment for a pool cleaner includes a planar member having an upper surface and a lower surface with an orifice formed through the planar member adapted for coupling to a vacuum suction source. A plurality of attaching means are formed on the lower surface of the planar member, each of which is adapted to interchangeably or selectively receive at least one of a plurality of rollers and a plurality of brushes that extend from the lower surface and support the nozzle attachment during movement over a surface being cleaned. When installed, the plurality of rollers and brushes change the nozzle attachment's flexibility characteristics, thereby permitting a user to adjust the overall flexibility of the nozzle attachment, based upon the type of surface to be cleaned.
