Abstract (en)
[origin: WO2006131681A1] The invention concerns a motor vehicle window control switch comprising: a guide rail (4) extending along an axis for opening and closing the window (8); and a slider (6) for supporting the window in a closing plane and which is slidably guided on the rail (4), said slider (6) being mobile along a travel path between an opening position corresponding to the window (8) in open position and a closing position corresponding to the window (8) in closed position. The guide rail (4) comprises at least one boss (32, 34) projecting at the surface of the rail (4) only in one point of the travel path, the or each boss (32, 34) being adapted to co-operate with the cursor (6) and the rail (4) at said travel path.
