Abstract (en)
[origin: WO2006121284A2] An air-conditioner for displaying a variety of avatars (i.e., avatar images) is disclosed. The air-conditioner includes: a standby mode performed before an air-conditioning function begins; an operation mode for indicating that the air-conditioning function is in progress; and a function selection mode for allowing a user to select a variety of functions. The air-conditioner can enable the user to easily recognize air-conditioning state information, indoor environment information, and other information, such that the user can effectively employ not only basic functions of the air-conditioner but also other additional functions.
