Abstract (en)  
[origin: US8539121B2] The invention relates to a device for connecting an electronic unit (1) to different types of screen, the device comprising an external connection connector (6) possessing connector elements (10) distributed in a first series for connection to the display members (17, 21) of screens, and a second series for connection to a loudspeaker (18) of a screen of a first type (2) or to the display member (21) of a screen of a second type (3), the device comprising a display line (7) connected to the connector elements of the first series, a sound line (8) connected to a switch member (11) connected to the connector elements of the second series, and a detector element (12) connected to the connector elements of the connector and to the switch member to cause the switch member to take up a connection state when the connected screen is of the first type and a disconnection state when the connected screen is of the second type. The invention also relates to a screen for connection to the device.
