Abstract (en)  
[origin: EP1889554A1] The case (10) is made of a square plastic sheet folded along two parallel positioned diagonal lines (62) in order to create a flat container with two layers at a slight distance from each other. A linear extension located along one of the edges is folded over and welded (44) to the opposite edge (60) also leaving a slight distance between the layers which is smaller than the distance between the adjacent edges. Curved recesses of different sizes give access to the stored triangle (12) with thumb and forefinger. The case (10) can be clipped into a folder by using two holes at the front (24,26).
