Abstract (en)

The container (2) has an opening, a flexible packing protruding in an uncompressed condition from the opening of the container, and is fitted in the cross-sectional surface of the opening at the container cross section. The rigid cover (1) is fitted to the cross-section of the container opening such that a subarea (3) of the opening of the container is not gripped by the rigid cover. The part of the flexible packing (5) is operated partly by a subarea and rest partly on the rigid cover such that the container is locked. The flexible packing has a hot-liquid polymer firm at ambient temperature. An independent claim is also included for a method for filling a flexible packing in a container.

Abstract (de)

Die vorliegende Erfindung betrifft einen Behälter (2) zumindest zur Aufbewahrung, zum Transport oder zur Bereitstellung eines heiß-flüssigen, bei Raumtemperatur festen Polymers mit einer flexiblen Verpackung (4) und einer starren Abdeckung (1) sowie ein Verfahren zum Befüllen der flexiblen Verpackung in einem Behälter mit einem heiß-flüssigen, bei Raumtemperatur festen Polymer.
