Abstract (en)  
[origin: EP1889992A1] The control (10) has an elastic body receiving a knob (4) with respect to a wall (13) in a rotational direction, where the wall includes an orifice (1) that has two notches. The knob has two projecting elements and is movable between two positions. One element cooperates with one notch to limit pivoting of the knob in two different directions at front and rear stop angles, and another element cooperates with another notch to limit the pivoting of the knob in the directions at other front and rear stop angles, in one position, where one rear stop angle is more than another rear angle.
