Abstract (en)  
[origin: WO2006114251A1] Mopping device (31) has a rotary drive and is provided with a mopping head (29), holding element or a handle (51). The mopping head comprises, for example, a cleaning cloth, a wiping cover, wiping mops and a wiping plate. The mopping head can be rotated for carrying out a dehumidifying process, preferably a hydro-extracting process. An independent claim is also included for the drying device.  
[origin: WO2006114251A1] The invention relates to a mopping device (31) provided with a mopping head (29) which comprises, for example, a cleaning cloth and/or a wiping cover and/or wiping mops and/or a wiping plate and a holding element and/or a handle. Said invention is characterised in that the inventive mopping device (31) is provided with a rotary drive by means of the which the mopping head (29) is rotated for carrying out a dehumidifying process, preferably a hydro-extracting process.
