Abstract (en)
[origin: WO2006119923A1] The invention relates to a spray nozzle comprising an output or mixing chamber (7) and at least two through bores (5) which lead to said output or mixing chamber and are connected to a fluid line, respectively. Said invention is characterised in that at least one through bore is embodied in such a way that it is self-cleaning and/or a cleaning device (74) is provided for at least one through bore. The invention can be used for example for two-component flue gas cleaning nozzles.
