Abstract (en)  
[origin: WO2006133843A1] Disclosed is a dosing device for metering agents in washing or cleaning processes. Said dosing device comprises a receptacle as well as a) a first active substance composition which is placed in said receptacle and contains at least one carrier material and at least one agent, and b) a second active substance composition that is arranged in said receptacle and also contains at least one carrier material and at least one agent but differs from the first active substance composition regarding at least one of the ingredients thereof. The inventive dosing device is characterized in that the carrier material in at least one active substance composition is water-insoluble while being suitable for releasing different active substances and distinguishing itself from conventional dosing devices by an improved releasing profile.
