Abstract (en)  
[origin: EP1736553A1] The present invention is directed to a method for determining if a subject is at increased risk to develop obesity or pathology related to obesity by determining the presence of a haplotype comprising three specific SNPs in a DNA or RNA sample of this subject and/or an elevated serum ENPP1 protein concentration. The present invention also relates to a kit and to an isolated nucleic sequence, vector or recombinant cell comprises said ENPP1 gene haplotype. The invention further comprises a method for selecting a compound for the treatment or the prevention of obesity or pathology related to obesity and a method for determining the efficacy of a drug to reduce the risk of obesity or pathology related to obesity in a patient.
