Abstract (en)

[origin: WO2006128527A2] The invention relates to a device for carrying out a method for producing one or more gases during which a liquid is electrolytically treated. An ion exchanger is provided in the liquid to which the gas to be produced clings. The device comprises a reservoir with a positive electrode and a negative electrode. In order to improve the efficiency, the positive electrode and/or the negative electrode have a structure with an enlarged surface.
