Abstract (en)
[origin: WO2006131454A2] The invention relates to a gas tap for controlling a gas volume flowrate to a gas burner (4) comprising an actuating shaft (10) which rotatably activates the gas volume flowrate and is pressed against a guiding slide (12) of the gas tap for releasing the rotational movement, wherein said guiding slide (12) comprises a first stop (13) restricting the rotatable movement of the actuating shaft (10) to a first operating position in which a minimum gas volume flowrate makes it possible to carry out a reliable ignition. In order to extend the functionality of the gas tap, the guiding slide (12) comprises a second stop (15) restricting the rotational movement of the actuating shaft to a second operating position. .
