Abstract (en)

[origin: WO2006133671A1] The invention relates to a mounting device (5), which may preferably be of application in a toroidal core (2) for a toroidal core, comprising a clip device (50) and hence fixed to a counter-piece and a support device for a toroidal core inductance. The support device comprises at least one clip device (113) to which the mounting device may be fixed. The invention further relates to an inductive component with a toroidal core inductance and a mounting for the toroidal core inductance, said mounting comprising the mounting device (5) and the support device.
