Abstract (en)
[origin: WO2006128787A1] The invention relates to a method for operating a bus system (100), wherein a bus user is embodied as a master (10) and at least two bus users which communicate via a bus (15) are embodied, respectively as slaves (20a, 20b, 20c, 20d). A slave (20a, 20b, 20c, 20d) is required by the master (10) to send data (DATA_1, DATA_2, DATA_3, DATA_4) and the master (10) emits a characteristic (ID) which is associated with the slave (20a, 20b, 20c, 20d). According to the invention, the master (10) emits a multiple characteristic (MID) which is associated with several slaves (20a, 20b, 20c, 20d), said several slaves (20a, 20b, 20c, 20d) emitting data (DATA_1, DATA_2, DATA_3, DATA_4) according to the multiple characteristics (MID).
