Abstract (en)

[origin: EP1892020A2] The holder unit has two shoe- or sole-holders (7), rotary around vertical axes, embraces an end area of the edge of sole-edge or ski-shoe from side, front or above, and cooperates with a spring arrangement. The sole-holders are designed as double arm levers, where the lever arms, distant to the sole, of the sole-holder cooperate with piston (11) which adjustably leads toward the transverse axis of the ski fitting and pushed against the lever arms, distant to the sole, by the spring common for both pistons and clamped between the pistons.
