Abstract (en)  
[origin: EP1892364A2] A panel structure equipped with a seal, comprising at least: a panel (14) which is intended for partitioning or protecting spaces and which can be coupled to a guide track (16) so that the panel can move along the guide track; and a seal (15) which is intended for sealing the gap between the panel and the guide track and which is coupled to the panel so that the seal is movable in relation to the panel and the guide track. The panel structure also comprises: a guiding member (17), by means of which the panel can be coupled to the guide track and which is fastened to the panel so that the guiding member is movable in relation to the panel and the guide track, wherein the guiding member is also coupled to the seal so that the guiding member controls the distance between the seal and the panel, when the guiding member is moving in the guide track. The panel system comprises a guiding piece (27) which is coupled to the guide track and forces the guiding member into the guide track and guides the guiding member off the guide track when the guiding member passes through the guiding piece.
