Abstract (en)

The blower (1) has a hub (5) for connecting the blower with an electrical driving motor. The hub is formed as cup-shaped, and the connection is formed in a torsion-smooth manner. A front area (5a) is provided with an annulus-like area with reduced wall thickness. The reduced wall thickness is designed as partition. Recesses (7) are arranged in the front area and covered by a foil e.g. adhesive film. The front area is provided with radially running bars. The blower is formed as a single-piece injection molded plastic part.

Abstract (de)

Die Erfindung betrifft einen Axiallüfter (1) mit einer Nabe (5) zur Verbindung des Axiallüfters mit einem elektrischen Antriebsmotor, wobei die Nabe (5) im Wesentlichen topfförmig ausgebildet ist und einen Stirnbereich (5a) sowie einen im Wesentlichen zylindrischen Umfangsbereich (5b) aufweist. Es wird vorgeschlagen, dass die Verbindung torsionsweich ausgebildet ist.
