Abstract (en)  
[origin: EP1892731A2] A cable sheath layer encloses insulated conductors, and is formed from a light-transmitting synthetic plastic material. Visible markings are arranged on the cable sheath layer opposite locations at which the cable sheath layer and one of the insulation layers may be severed by an insulation-piercing contact to effect electrical engagement with a selected conductor (2). An independent claim is included for a method for producing an electrical cable.
