Abstract (en)

[origin: EP1039589A1] The distributor is in a strip form (1) and has a number of connectors (2) in the form of bushes that are used to receive the connection plugs attached to sensors or actuators by cables. An electronic unit (6) is used to provide supplies and signals for the sensors or actuators through pins (4) connected to conductors embedded in the distributor. The distributor and electronic unit are mechanically and electrically separable from each other.
