Abstract (en)  
[origin: US2010012672A1] Case including a plate (12) to which a lid (13) is attached so as to be able to pivot between a retracted position and a raised position that is virtually perpendicular to the plate, and an unfoldable structure (14) that has a first portion that is attached to the upper surface of the plate and a second portion that is attached to the inside surface of the lid. The attachment of the cover to the plate is advantageously carried out by attachment elements (122, 132) that are assembled by simple interlocking. Members (131, 124, 134) are arranged to ensure that the lid (13) has a stable position when it is in its raised position. The plate (12) is advantageously mounted on a basket (11) so as to be able to slide relative to the basket.
