Abstract (en)
[origin: US2006289710A1] A bracket for circuit boards includes a rectangular rigid base having a bottom edge and a planar front surface. A head extends upwardly from the base and includes a threaded bore along a longitudinal axis. An intermediate region of the bracket between the head and the base includes a substantially rectangular aperture extending laterally through the intermediate region. A top surface of the head of the bracket includes a planar surface adapted for pick-and-place transportation. A planar bottom surface of the base is preferably adapted for surface mounting to a circuit board by soldering and may further include downward extending pins to be received in corresponding holes in the circuit board.
