Abstract (en)

[origin: DE102005030312A1] The rotary pelletizing machine (10) has a drivable die block with dies round it having bottom and top rams, rotating about a common axis with the die block along top and bottom guide, a filler device and a compression device. The filler device (18) comprises at least two independently chargeable filling chambers (24), which can be brought successively into a defined filling position.
