Abstract (en)

[origin: WO2007002292A2] A fitment for a liquid containing pouch wherein the fitment is attached to the top portion of the pouch by sealing the top portion of the pouch together and to the sealing portion of the fitment. The fitment having a straw therein and a removable cap for sealing the liquid in the pouch. The cap can be removed to allow access to the straw and the liquid in the pouch. The cap can be replaced on the fitment to reseal the pouch. Since the straw is already in the fitment it is easier to use than liquid containing pouches where the straw has to be inserted into the pouch by breaking a seal. Further the straw in the fitment helps prevent spills and injuries associated with straws having to break the seal of the pouch.
