Abstract (en)

[origin: DE102005029434A1] Vibrating plate comprises upper mass with drive, lower mass with soil contact plate and vibration generator device, which belongs to lower mass and acts upon soil contact plate. The vibration generator device comprises at least two individual exciters (13) each with unbalanced shaft (2). The individual exciters can be individually controlled with regard to the rotational speed and/or phase position of the respectively assigned unbalanced shaft. A mechanical coupling of the unbalanced shafts is unnecessary. The unbalanced shaft of an individual exciter can be rotationally driven by a hydraulic motor (4). The position of the unbalanced shaft is determined in at least one position by a position indicator.
