Abstract (en)

[origin: WO2006136396A2] The invention relates to a method for production of insulating boards from mineral fibres, comprising at least one elasticised lateral surface and/or at least one elasticised lateral surface region. According to the invention, a method for a simple and economical production of insulation elements, in particular insulation boards which are elasticised in a region of at least one lateral surface may be achieved, whereby the elastication is achieved by local compression and/or local separation of at least on lateral surface and/or at least one lateral surface region of the insulation element, in particular, the insulation board.
