Abstract (en)

[origin: WO2006122335A1] The cylindrical mechanism of mortise lock comprises a frame in which barrels are fixed on both sides of the frame, with cores and a key. The length of the frame is made shorter than the minimal thickness of standard entry doors, and it is additionally equipped with key guides which are made both as inserts and cover planks, and the length of the key is selected according to the thickness of the door.
