Abstract (en)
[origin: WO2008003106A1] Proposed is a furniture hinge comprising a body hinge part (2) that can be fastened to a furniture body (1), a door leaf hinge part (3) that can be fastened to a door leaf (3) and at least one articulated lever (5, 6) for the articulated connection of the body hinge part (2) to the door leaf hinge part (4), wherein the articulated lever (5, 6) is connected to a hinge arm (11) of the body hinge part (2) such that it can pivot about a swivel axis (7, 9). To adjust the level of the door wing (3) in relation to the furniture body (1), the hinge arm (11) can be adjusted in the direction of the longitudinal extension thereof in relation to a retaining part (16) of the body hinge part (2) by means of an eccentric disk (14) acting between the hinge arm (11) and the retaining part (16), the axis of rotation (23) of said eccentric disk being disposed parallel to the swivel axis (7, 9) of the at least one articulated lever (5, 6).
