Abstract (en)
[origin: FR2903672A1] The device (1) has a container (2) retained inside an outer shell (3), and forms a housing to receive a cosmetic product (P), where the shell is made of a transparent material. The shell has a transverse window (13) in which an outer lateral annular indentation (12) of the container is engaged to retain the container in the shell, where the window is formed via a neck (28) of the shell. An opaque closure (4) is retained on the container for closing the container, and has a skirt (8) masking the window in assembled position on the container.
