Abstract (en)  
An object of the present invention is to provide a card dispensing apparatus that does not damage cards even if the cards are made of vulnerable material. In a card dispensing apparatus in which a surface of one of cards is pressed toward a base disposed in a fixed state to hold the cards in a columnar shape and a conveying member in contact with the card surface via an opening of the base is moved in a predetermined direction, thereby dispensing the cards one by one in the predetermined direction, the conveying member has a flat contact surface, and is moved by flat loop movement means to advance into the opening from a predetermined advancing position to make a surface contact with the card surface, then linearly move in a predetermined direction while maintaining the contact state, then retract from the opening to a retract position, and then move to the advancing position while maintaining its state.
