Abstract (en)
[origin: EP1895083A2] The sliding door comprises a fixed leaf (1) and a moving leaf (2) arranged to run parallel and close thereto. The moving leaf (2) has an upper edge connected to a support carriage running along an upper guide and a lower edge having a projecting journal (5) inserted to run along a lower guide (6). A hinge is arranged to allow rotation of the moving leaf in relation to said support carriage about a vertical axis aligned with said journal for an emergency pivoting opening. The fixed leaf (1) can also carry out an emergency pivoting opening with respect to a vertical axis (27) when pushed by the moving leaf. Projecting from a lower side end of one of the fixed or moving leaves (1) there is a protective stop (8, 9) facing the other moving or fixed leaf (2) to make contact therewith when leaves rub or collide.
