Abstract (en)

The sliding door comprises a fixed leaf (1) and a moving leaf (2) arranged to run parallel and close thereto. The moving leaf (2) has an upper edge connected to a support carriage running along an upper guide and a lower edge having a projecting journal (5) inserted to run along a lower guide (6). A hinge is arranged to allow rotation of the moving leaf in relation to said support carriage about a vertical rotation axis aligned with said journal for an emergency pivoting opening. The fixed leaf (1) can also carry out an emergency pivoting opening with respect to a vertical rotation axis (27) when pushed by the moving leaf. Along the lower edge of at least one of the fixed or moving leaves at least one protective strip (8) is arranged to make contact with the other moving or fixed leaf when the leaves rub or collide.
