Abstract (en)
[origin: EP1895252A2] The device has a mounting frame, which has a recess (20), and a component is incorporated in the recess. The recess is larger than the component, so that with component inserted into the recess a partial area of the recess remains free. The recess or the component has a fastener, which fixes the component in the recess in a detachable manner. The device also has a detachable assembly component (30) fixed in the recess, which is dimensioned in such a manner that the remaining partial area is partly or completely filled.
