Abstract (en)
[origin: EP1895253A2] The refrigerator has an installation unit (1) for receiving cooling goods, and a retaining head (10) engaging in a groove formed in an inner wall of the refrigerator and moved to the installation unit. A bolt (13) is moved from a position, in which the bolt sustains the retaining head against an inner surface of the groove, to another position, in which the bolt permits the retaining head to move away from the inner surface. The groove has an undercut, in which the retaining head is engaged.
