Abstract (en)

[origin: WO2006134579A2] The subject of the present invention is a method for preventing phage mediated inactivation of probiotic strain mixtures used in animal rearing, by means of the use of alternating strain mixtures isolated from the digestive apparatus. Rotation of the strains, for example in fowl, is performed at the beginning of each new reproductive cycle. Such a method allows overcoming the problem of inactivation of the strain mixture over the long term.
