Abstract (en)

[origin: WO2006131558A1] The invention relates to a device (400) for fixing a visor (200) to a cask shell (100) in such a way that the visor (200) is movable with respect to said shell (100) between lower and top positions, wherein said device comprises an element (430), which connects the visor (200) to the shell (100) and is rotatably mounted about a first axis of rotation (432) with respect to the shell (100), and means (440) for guiding the visor (200) movements between the lower and top positions thereof. The inventive device is characterised in that the connecting element (430) is also rotatably mountable about a second axis of rotation (433) with respect to the visor (200).
